

FOUNDATIONAL EDITION / 2026

Kramaniti Brand Book

Identity, voice, visual system, applications, and governance.

Version 1.0 - Internal master - 29 July 2026

HOW TO USE THIS BOOK

Document control

A working standard for anyone shaping Kramaniti in words, visuals, products, documents, or public experiences.

01

Edition

- Version 1.0
- Published internally on 29 July 2026
- Owner: Founder, Kramaniti
- Steward: Digital Presence Orchestrator

03

Source hierarchy

- Live implementation and master context
- Current decision log and proof register
- Brand strategy and design-kit documents
- Registered Kramaniti assets

02

Status

- Foundational internal reference
- Review-ready, not a permission grant for public proof
- Public release requires founder approval
- New strategic choices must be recorded in the decision system

04

Status language

- [Fact] verified or implemented
- [Recommendation] proposed standard
- [Inference] interpretation of current evidence
- [Unverified] requires confirmation

SIX CONNECTED SYSTEMS

Contents

The book moves from business meaning to repeatable execution.

01

01 / Foundation

- Identity, purpose, promise, positioning, audiences, services, method, and trust.

02

02 / Verbal identity

- Personality, voice, messaging hierarchy, vocabulary, proof-safe writing, and calls to action.

03

03 / Visual identity

- Mark, color, typography, layout, motifs, imagery, motion, and accessibility.

04

04 / Applications

- Website, product surfaces, social/editorial assets, decks, documents, and video.

05

05 / Governance

- Asset control, proof review, approvals, quality gates, and production standards.

06

06 / Reference

- Quick rules, open decisions, source lineage, and ownership.

01 / WHAT KRAMANITI MEANS

Foundation

Strategy before tools. Systems before scale. Content after clarity.

Brand meaning begins with the way the business works, not with decoration.

04 / KRAMANITI BRAND SYSTEM

CANONICAL POSITIONING

Brand at a glance

Kramaniti is a first-principles AI systems partner that connects strategy, operational infrastructure, and cinematic content into one brand growth pipeline.

01

The problem

Brands often add tools before understanding the work. Operations stay scattered, AI ideas remain vague, and communication loses contact with real value.

02

The response

Kramaniti studies the workflow, chooses the problem worth solving, builds the simplest useful system, and turns the resulting clarity into stronger communication.

03

The outcome

Clearer decisions, more reliable workflows, better adoption, and a brand message that reflects what the business can actually deliver.

INTERNAL NAMING RATIONALE

The name

Kramaniti brings sequence and strategy into one word.

01

Krama

The internal naming logic uses krama to represent sequence, order, and step-by-step progression.

KRAMA

03

Combined meaning

The intended brand idea is the logic of sequence: thinking clearly about what should happen, in what order, and under whose judgment.

02

Niti

The internal naming logic uses niti to represent strategy, policy, logic, and ethical judgment.

04

Naming guardrail

Treat this as Kramaniti's brand rationale, not as a claim of a single literal translation. Do not over-explain the etymology in first-impression copy.

NITI

Purpose, vision, and mission

Three statements turn the positioning into a usable decision system.

01 Purpose

Make practical intelligence useful in the way a business actually works.

03 Mission

Diagnose workflows, build practical systems around the work that matters, and turn operational clarity into stronger brand communication.

02 Vision

A business landscape where AI supports human judgment, systems make work clearer, and communication reflects real operating value.

04 Use

Purpose guides why. Vision guides the future state. Mission guides what Kramaniti does now. These statements are recommendations until explicitly adopted.

PUBLIC EXPRESSION

The brand promise

Simplify how your business works, uses AI, and communicates.

01

Works

The brand begins with the real operating flow: decisions, tasks, handoffs, information, and accountability.

02

Uses AI

AI is applied only where it improves a useful workflow. It may automate, assist, surface options, or prepare drafts.

03

Communicates

Clearer internal work should produce clearer external language, stronger content, and a more coherent brand presence.

Promise boundary

Kramaniti does not promise hands-free operations, universal automation, or outcomes that have not been evidenced.

WHAT WE BELIEVE

Manifesto

Better tools do not fix unclear work. Better thinking comes first.

- We believe a business should understand its work before it adds technology.
- We believe AI should assist people, not erase judgment, context, or accountability.
- We believe precision and imagination belong in the same system.
- We believe scale should follow reliable systems, not compensate for their absence.
- We believe communication becomes stronger when it grows from operational clarity.
- We build for useful adoption, honest proof, and progress that can be maintained.

THE ORDER IS THE STRATEGY

The narrative sequence

Every Kramaniti story should preserve this progression.

Strategy before tools

Systems before scale

Content after clarity

Public-language note

01

Understand the business, map the workflow, and define the problem before choosing technology.

02

Create repeatable processes, ownership, and review rules before expanding output or reach.

03

Translate genuine operating value into useful communication, founder narrative, and cinematic content.

04

On the website, content may be expressed as communication. The principle remains the same: presence follows clarity.

MARKET ROLE

Positioning

Kramaniti sits between systems consulting and cinematic brand craft without becoming either a generic technology vendor or a traditional content agency.

01 First-principles systems partner

Kramaniti starts with the work itself: why it exists, how it moves, where it fails, and what improvement would matter.

02 Practical AI infrastructure

Technology choices are shaped by workflow fit, adoption, review, override, security, and maintainability.

03 Cinematic communication

Once the operating logic is clear, the brand can explain complex value with structure, atmosphere, and human relevance.

04 Positioning boundary

Do not describe Kramaniti as an AI automation agency. Do not lead with model names, agents, APIs, or technical jargon.

WHO THE BRAND IS FOR

Primary audiences

The strongest fit is a founder or operating team facing both workflow friction and communication complexity.

01

Founders and early operators

They have an idea, product, or growing business but lack a clear operating sequence or practical AI path.

03

Space-led businesses

Co-working, real estate, hospitality, and physical-experience brands benefit from Kramaniti's spatial and cinematic perspective.

02

B2B and technology teams

They have complex offerings, scattered internal work, or adoption questions that require systems thinking and clearer language.

04

Agency and delivery partners

Traditional agencies can use Kramaniti as a systems and workflow partner when internal technical capability is limited.

THREE SIGNALS OF FRICTION

The business problem

Most businesses do not need more AI tools. They need clearer ways of working.

01

Work gets lost

Important tasks and decisions depend on memory, meetings, inboxes, or manual follow-ups.

02

Tools do not connect

Teams use multiple systems, but information, ownership, and handoffs remain scattered.

03

The message becomes unclear

Public communication no longer reflects the value being created inside the business.

Diagnostic response

Clarify how the work happens today, identify where it slows down, and choose the first useful improvement.

The distinctive tension

Kramaniti combines rigorous operating logic with an ability to make complex ideas feel human and memorable.

01 Precision without sterility

Workflows, decision gates, evidence, and system boundaries create rigor.

02 Craft without vagueness

Narrative, composition, pacing, and visual atmosphere make rigor understandable.

03 Human judgment without resistance

People remain accountable while AI supports repetitive, analytical, or drafting work.

04 Differentiation test

If an output could belong to any AI consultancy or any creative agency, it is not specific enough to Kramaniti.

THREE WAYS TO ENGAGE

Public service architecture

Start with the need that exists now, then move only as far as the business is ready to adopt.

01 Workflow Audit / Clarity

For businesses that need to decide what to improve first. Review the business, map friction, assess readiness, and recommend the first system.

03 Ongoing Partnership / Continuity

For businesses that want continued support across systems, adoption, workflow improvement, and brand communication.

02 System Build / Practical build

For businesses ready to improve a real workflow with practical tools, documentation, adoption guidance, and human review rules.

04 Capability layer

AI Enablement and Adoption runs through all three services. It is not a separate fourth offer.

FROM CURRENT WORK TO CLEARER WORK

The Kramaniti method

Every engagement begins with the workflow, not the tool.

AI SHOULD ASSIST / HUMANS SHOULD LEAD

Human-collaborative AI

Kramaniti designs the boundary, not only the model call.

01

Automate

Use deterministic automation for repetitive, low-ambiguity steps with clear failure handling.

02

Assist

Use AI to summarize, classify, draft, compare, or surface options where a person remains responsible for the decision.

03

Keep human-led

Retain human ownership where context, trust, taste, negotiation, ethics, or irreversible consequences matter.

Required controls

Every system should define inputs, review checkpoints, override rules, exception paths, data boundaries, and a named owner.

TRUST IS A SYSTEM

Credibility without overclaiming

Kramaniti earns authority by showing its reasoning, boundaries, and real work - not by filling a page with unverified logos.

01

Safe public proof

Use category-level language when permissions are unclear: experience across co-working, hospitality, education, startup, and B2B technology ecosystems.

02

Limited-use proof

Selected experience may appear only in approved wording and context. Do not imply endorsement, quantified outcomes, or broad client relationships.

03

Never invent

No fabricated metrics, testimonials, client names, case studies, awards, or performance claims.

04

Proof behavior

Classify, source, review, soften, approve, and record before publication.

Brand architecture rules

Kramaniti should remain the source of trust while services, products, and internal systems keep distinct roles.

01

Masterbrand

Kramaniti owns the method, visual system, voice, proof standards, and relationship with the audience.

02

Service descriptors

Workflow Audit, System Build, and Ongoing Partnership explain how a client engages. They are not separate brands.

03

Product names

Named tools may have distinct marks or interfaces, but must state their relationship to Kramaniti and inherit governance rules.

04

Internal systems

Founder operations and production tools should not be marketed as public offers unless a newer decision explicitly changes their role.

Verbal identity

Clear enough to understand in seconds. Deep enough to support serious decisions.

Language should reveal the operating logic without turning the brand into a technical manual.

FIVE CHARACTER TRAITS

Brand personality

The voice should feel like a thoughtful systems partner with the eye of a filmmaker and the restraint of a trusted advisor.

DIRECT / ANALYTICAL / PRACTICAL / CALIBRATED

Voice principles

Kramaniti communicates like a partner who has inspected the work and can explain what matters next.

01

Direct

Lead with the outcome. Remove filler, throat-clearing, and vague enthusiasm.

02

Analytical

Name inputs, sequence, decision points, dependencies, and boundaries.

03

Practical

Translate technical capability into work a founder or operator can recognize.

04

Calibrated

Separate facts, inferences, unverified claims, and recommendations.

05

Founder-led

Use first-person perspective when it adds lived context, not as a substitute for proof.

ONE VOICE / DIFFERENT LEVELS OF ENERGY

Tone spectrum

Tone changes with the situation; the underlying character does not.

Messaging hierarchy

The order of information determines whether Kramaniti feels useful or abstract.

01

01 / Business value

Simplify how the business works, uses AI, and communicates.

02

02 / Problem

Work is scattered, tools do not connect, and the message no longer reflects real value.

03

03 / Method

Understand, prioritise, design, build, train, communicate, improve.

04

04 / Services

Workflow Audit, System Build, Ongoing Partnership.

05

05 / Technical depth

Discuss models, integrations, data flows, and infrastructure only after relevance is clear.

APPROVED DIRECTION / ADAPT WITH CARE

Core message bank

Use these lines as anchors, not as copy that must appear everywhere.

01

Master line

Simplify how your business works, uses AI, and communicates.

02

Problem line

Most businesses do not need more AI tools. They need clearer ways of working.

03

Method line

Understand the work. Build the right system. Communicate it clearly.

AI principle

AI should support your team, not replace its judgment.

STRUCTURES THAT SOUND LIKE KRAMANITI

Headline patterns

Strong headlines expose a decision, sequence, tension, or operating truth.

01

Sequence

Understand the workflow before choosing the tool.

02

Contrast

More AI is not the same as better work.

03

Consequence

When handoffs stay unclear, automation scales the confusion.

04

Practical question

Which part of this workflow is actually worth improving first?

05

Transformation

From scattered work to one clearer operating sequence.

06

Avoid

Do not use empty superlatives, trend summaries, or abstract promises without a visible business problem.

WORDS THAT CARRY THE POSITIONING

Preferred vocabulary

Repetition is useful when it reinforces a distinct operating worldview.

01

Strategy

clarity, first principles, priorities, tradeoffs, diagnosis, roadmap, direction, business value

02

Systems

workflow, infrastructure, handoff, review, override, integration, operating pipeline, adoption, maintenance

03

AI

practical AI, assistance, decision support, controlled automation, human review, context, accountability

04

Communication

brand growth, founder narrative, clarity, content system, cinematic craft, distribution, trust

05

Verbs

understand, map, choose, design, build, connect, train, communicate, review, improve

ZERO-HYPE STANDARD

Language to avoid

Replace inflated language with a specific action, constraint, or observable result.

01

Avoid

revolutionary AI, cutting-edge transformation, unlock the future, automate everything, next-gen solutions

02

Avoid

agentic everything, game-changing, world-class, state-of-the-art, seamless transformation, synergy

03

Avoid

delve, testament, empower, leverage as a verb, rapidly changing landscape

04

Replace with

current, practical, measured, connected, reviewed, specific, maintainable, useful

05

Test

If the sentence sounds impressive but does not tell the reader what changes in the work, rewrite it.

Writing mechanics

Short conclusions and explicit sequences create clarity without flattening depth.

01

Lead

Open with the conclusion, decision, or problem. Do not begin with general commentary about AI.

02

Structure

Use one idea per paragraph. Prefer three-part sequences, compact lists, and meaningful subheads.

03

Detail

Name the workflow, role, handoff, system, or review point instead of using broad transformation language.

04

Length

Keep first-impression copy compact. Allow depth in articles, audits, and implementation documents.

05

Punctuation

Use sentence case. Avoid excessive exclamation marks, decorative punctuation, and all-caps headlines.

INVITE THE NEXT USEFUL STEP

Call-to-action system

A Kramaniti CTA should reduce ambiguity, not manufacture urgency.

PRIMARY

Book a Workflow Audit

EDUCATIONAL

See the Full Process / Read the Insight / Understand the Method

AVOID

Get started now, unlock growth, transform today, book before it is too late, or any pressure language not supported by a real constraint.
Avoid

Get started now, unlock growth, transform today, book before it is too late, or any pressure language not supported by a real constraint.

SERVICE SPECIFIC

Discuss a System Build / Explore Ongoing Support

PRODUCT

Get Clarity / Continue to the Blueprint / Save to Project

CONFIDENCE MUST MATCH EVIDENCE

Proof-safe writing

Trust grows when the brand knows the difference between what it knows, what it infers, and what it recommends.

01

Fact

Use for implemented, founder-confirmed, or verifiable information.

02

Inference

Use for a logical interpretation that follows from available facts.

03

Unverified

Use when a claim, permission, date, metric, or attribution still needs confirmation.

04

Recommendation

Use for a proposed direction, standard, or next step.

05

Public rule

Labels may be translated into polished prose, but the underlying evidence status must remain visible in the working file and proof register.

CHANGE THE EMPHASIS / KEEP THE CORE

Audience adaptation

Kramaniti should meet each audience at its problem without becoming a different brand.

01

Founder

Lead with clarity, priorities, decision support, and the next useful system.

02

Operator

Lead with workflow friction, handoffs, ownership, adoption, and maintainability.

03

Technical lead

Lead with architecture only after the business objective and data boundary are explicit.

04

Creative or brand lead

Lead with narrative coherence, production systems, reuse, and the link between operations and communication.

05

Partner or agency

Lead with complementary capability, clear scope, handoff quality, and proof discipline.

SAME POSITIONING / DIFFERENT DENSITY

Channel tone matrix

The channel changes the pace and depth, not the brand's standards.

Channel	Lead with	Tone	Typical next step
Website	business value and problem	simple, premium, direct	workflow audit
Insights	useful point of view	educational, specific	read related method
LinkedIn	founder or operating insight	concise, human, practical	discuss or save
Proposal	decision and scope	advisory, explicit	approve next stage
Product UI	action and state	operational, calm	complete the task
Film	tension and transformation	cinematic, restrained	understand the idea

Visual identity

A quantitative research portal meets an independent film studio.

The system is dark-first, gold-led, editorial, spacious, and quietly technical.

The visual idea

The identity makes structured thinking feel alive without resorting to generic technology imagery.

01

Computational precision

Grids, coordinates, rails, nodes, measured spacing, monospace annotations, and explicit hierarchy.

02

Cinematic craft

Directional light, warm-cool tension, depth, negative space, controlled reveal, and visual pacing.

03

Shared principle

Every visual device should clarify a relationship, sequence, or focal point.

04

Design test

Remove decoration that does not help the reader understand where to look, what connects, or what matters next.

The primary mark

Use the supplied Kramaniti gold mark as artwork. Never redraw it from memory or substitute a letterform.

01

Current asset

08_brand_assets/logos/kramaniti_mark_gold.png

02

Asset color

The artwork uses Mark Gold #CCA300. Preserve the source color inside the logo asset.

03

Relationship to interface gold

Burnished Gold #C9A84C is the broader interface accent. The two values have distinct roles and should not be forced into one value by recoloring the mark.

04

Usage boundary

The mark is used in the live website and approved Kramaniti document workflow. Other campaign and public contexts still follow the asset registry.

RECOMMENDED PRODUCTION STANDARD

Clear space and minimum size

Give the mark room to hold its shape, especially against detailed or luminous backgrounds.

Conservative working specification

01

Clear space

Keep at least 0.25 times the visible mark width clear on every side. Use more space in premium editorial layouts.

02

Digital minimum

Do not render the symbol smaller than 24 px. Use 32 px or more in navigation and 48 px or more in hero or document contexts.

03

Print minimum

Do not reproduce the symbol below 8 mm wide. Verify fine edges in a physical proof.

04

Background

Use on Obsidian, Graphite, warm white, or a quiet image area with sufficient contrast. Do not place on visually noisy detail.

FUNCTIONAL TEXT SYSTEM / NOT A REDRAWN LOGO

Name and lockup

The current brand system uses the supplied mark and the name Kramaniti as coordinated elements.

Kramaniti

FUNCTIONAL TEXT PAIRING

01

Brand name

Set Kramaniti in Outfit Bold or ExtraBold for headings and prominent digital use.

03

Capitalization

Use Kramaniti in title case in prose. Use KRAMANITI only for small metadata or production labels.

02

Spacing

When paired horizontally, keep the text baseline optically aligned to the mark and leave at least half the mark width

Between symbol and name.

Guardrail

No dedicated wordmark artwork is registered in the current asset library. Do not treat typeset text as a protected master-logo file.

Mark misuse

The mark should feel deliberate in every context.

Do not

Stretch, compress, rotate, shear, crop, outline, or redraw the mark.

Do not

Apply gradients, drop shadows, neon glows, textures, or alternate colors to the source artwork.

Do not

Place the mark inside an improvised badge, circle, pill, or decorative frame.

Do not

Use the mark over low-contrast imagery or so close to edges that the clear space disappears.

Do

Use the registered asset, preserve its aspect ratio, and simplify the surrounding composition.

DARK DEPTH / WARM SIGNAL / CLEAR TYPE

Color architecture

Kramaniti's palette separates atmosphere, information, and action.

01

Base

Obsidian, Graphite, and Charcoal create depth without glossy futurism.

02

Signal

Burnished Gold carries active emphasis, coordinates, key lines, and primary actions.

03

Text

Ice White, Silver Mist, and Slate Grey establish a controlled information hierarchy.

Utility

Success, warning, error, and information colors communicate state. They are not brand decoration.

PRIMARY TOKENS

Core palette

Use these values consistently across web, product, deck, and editorial production.

Obsidian

#0A0A0F

primary dark field

Graphite

#141418

elevated surface

Charcoal

#1E1E24

input and hover surface

Burnished Gold

#C9A84C

primary accent

Mark Gold

#CCA300

source mark artwork

Ice White

#F0F0F5

primary dark-mode text

Silver Mist

#9B9BA8

secondary text

Slate Grey

#6B6B78

tertiary text

Smoke

#2A2A32

subtle border

Paper Tint

#FCFBF8

editorial light field

Ink

#151515

primary light-mode text

STATE, NOT DECORATION

Utility and support colors

Utility colors should appear only when the interface or document needs to communicate a distinct state.

Success

#3ECF8E

completion and confirmed success

Warning

#F5A623

caution, pending review, risk

Error

#E54D42

failure, validation, destructive action

Information

#4A90D9

help, links, neutral information

Aged Bronze

#A07D3A

secondary depth and print support

Muted Amber

#D4A843

warm annotation or highlight

RESTRAINT CREATES VALUE

Color proportion

Gold is a signal. It loses meaning when it becomes the entire field.

DARK DIGITAL

LIGHT EDITORIAL

01

Dark digital composition

- 70-80% Obsidian or Graphite
- 15-25% Ice White and Silver Mist
- 5-10% Burnished Gold and supporting accents

03

Exceptions

Section dividers, launch moments, or short-form brand films may use a larger gold gesture if the surrounding composition remains quiet.

02

Light editorial composition

- 75-85% Paper Tint or white
- 10-20% Ink and muted text
- 3-8% gold rules, marks, and focal details

Contrast and accessibility

The core palette supports strong contrast when text roles are applied correctly.

Pairing	Contrast	Guidance
Ice White on Obsidian	17.39:1	primary text
Silver Mist on Obsidian	7.19:1	body and secondary text
Burnished Gold on Obsidian	8.64:1	labels and emphasis
Obsidian on Burnished Gold	8.64:1	CTA text
Ink on Paper Tint	17.65:1	editorial body
Slate Grey on Obsidian	3.76:1	large or non-essential text only

Avoid

White text on Burnished Gold is only 2.29:1. Use Obsidian text on gold buttons and labels.

ONE GEOMETRIC VOICE / ONE TECHNICAL ACCENT

Typography family

The live Kramaniti system uses Outfit for display and reading, with JetBrains Mono for coordinates and system detail.

Clarity before complexity.

[01/UNDERSTAND] -> [02/BUILD] -> [03/COMMUNICATE]

ABCDEFGHIJKLMNOPQRSTUVWXYZ abcdefghijklmnopqrstuvwxyz 0123456789

01

Outfit

Use Regular for body, Medium for compact emphasis, SemiBold for section titles, and Bold or ExtraBold for primary headlines.

02

JetBrains Mono

Use for numbers, coordinates, statuses, metadata, file references, and technical annotations.

03

Fallback

Use Inter, Poppins, or a clean system sans only when Outfit is unavailable. Keep the hierarchy and spacing intact.

04

Avoid

Do not mix decorative serif, script, condensed display, or multiple geometric sans families in one asset.

Type scale

Scale should preserve hierarchy across desktop, mobile, decks, and product surfaces.

Role	Desktop	Mobile	Weight	Line height
Hero	56-72 px	36-42 px	700-800	1.04-1.10
Section title	40 px	28 px	600-700	1.15-1.20
Subsection	28 px	22 px	600	1.25-1.30
Card or module	20 px	18 px	500-600	1.35-1.40
Body large	18 px	16 px	400	1.60-1.70
Body	16 px	15 px	400	1.60-1.70
Caption	13 px	12 px	400-500	1.45-1.55
Micro-label	11-12 px	10-11 px	600-700	1.40-1.50

EDITORIAL HIERARCHY

Type composition

A composition should feel calm before it feels clever.

01

Headline

Use sentence case, a tight line height, and a balanced maximum width. Avoid all-caps primary headlines.

02

Lead

Place one short explanatory line under the title. Keep it under roughly 680 px or 72 characters.

03

Body

Use short paragraphs, generous line spacing, and visible separation between ideas.

04

Micro-label

Uppercase is allowed only for small coordinates and section labels. Use JetBrains Mono or Outfit SemiBold with tracked spacing.

05

Emphasis

Highlight one noun, number, or decision in gold. Do not color every keyword.

STRUCTURE THAT CAN BREATHE

Layout grid

Grids provide alignment; negative space provides authority.

One dominant axis.

12 COLUMNS / 24-32 PX GUTTER / 1200 PX MAX

01

Desktop

Use a 12-column grid within a 1200 px maximum container and 24-32 px gutters.

02

Mobile

Use a 4-column grid with 16-20 px outer margins and at least 16 px between modules.

03

Editorial

Use a 6- or 12-column landscape grid. Let headlines span fewer columns than diagrams or tables.

04

Alignment

Choose one dominant axis per composition. Avoid centering every element when the content needs a reading path.

05

Negative space

Reserve at least 30% of high-impact imagery and section openings as quiet space.

SOFT DEPTH / CONTROLLED GEOMETRY

Spacing, surfaces, and radius

The system should feel dimensional without becoming glossy or ornamental.

01

Spacing

Use an 8 px base rhythm. Preferred intervals: 8, 12, 16, 24, 32, 48, 64, 96, 120.

02

Radius

Use 8 px for buttons and controls, 18–28 px for expressive panels, and full pills only for compact actions or statuses.

03

Surfaces

Use Graphite or Charcoal with a subtle one-pixel border. Light mode relies on soft shadow and tonal separation.

04

Glass

Glass effects should be quiet, readable, and limited to one enclosure layer. Avoid stacked translucency and heavy blur.

05

Shadow

Use broad, low-opacity elevation. Do not use hard black drop shadows or colored neon glows.

THE SIGNATURE MOTION LANGUAGE

Flow-line system

Thin rails and moving signals make sequence visible without turning the page into a circuit-board cliché.

Input

Output

Review

ACTIVE SIGNAL

Geometry: Use one-pixel horizontal or vertical lines, occasional right-angle paths, and clear intersections.

Motion: Use varied durations and negative delays so lines feel alive on entry. Horizontal motion travels left to right; vertical motion travels top to bottom.

Signal: Place a small warm node or traveling highlight on a line to show progress, focus, or handoff.

Static translation: In print, freeze the signal near a meaningful junction and use the line as a divider, path, or coordinate frame.

Opacity: Keep static rails between 8% and 34% opacity. The active signal may reach full gold or warm white briefly.

SUPPORTING MOTIFS

Nodes, orbits, and grids

Each motif carries a different kind of relationship.

Nodes

Represent decisions, handoffs, inputs, outputs, or moments of human review.

Orbits

Represent connected layers such as strategy, systems, and communication around a shared foundation.

Grids

Represent order, measurement, and a field of possible routes. Keep them faint and incomplete.

Rails

Represent sequence and continuity. Use them for processes, timelines, and staged explanations.

Rule

Do not combine every motif on one screen. Choose the smallest visual language that makes the relationship clear.

MEANING AT THE EDGE OF ATTENTION

Atmospheric words

Oversized words can anchor a section without competing with the headline.

01

Approved direction

Use short, semantically relevant words such as Clarity, Focus, Method, Layers, Offer, Build, Flow, Run, Trust, or Start.

03

Placement

Crop partially at a page or viewport edge and keep the readable headline in the foreground.

02

Treatment

Set in Outfit at very large scale, low opacity, or transparent fill with a quiet gold outline.

04

Limit

Use one or two atmosphere words per section. Do not create decorative word clouds or repeat the page title at full opacity.

SIMPLE LINES / CONSISTENT GEOMETRY

Iconography

Icons explain actions and states. They should not carry the identity by themselves.

Style

Use open line icons with 1.5 px strokes, rounded caps, and consistent optical weight.

Color

Use Silver Mist by default. Use Burnished Gold for active, selected, or focal states.

Sources

Prefer Lucide or Phosphor when a standard interface symbol is needed.

Custom symbols

Build custom diagrams from rails, nodes, brackets, and measured geometry rather than illustrative 3D icons.

Avoid

No emoji as interface icons, no filled cartoon sets, no skeuomorphic objects, and no mixed icon families.

Photography direction

Photography should feel observed, spatial, and real - never like a generic corporate stock library.

Directional light

CONCEPT FRAME / NOT A STOCK IMAGE

01

Light

Use low-key, directional light with warm amber highlights against cool or neutral shadows.

02

Space

Create foreground, midground, and background separation. Use leading lines and at least 30% negative space.

03

Human presence

Show real gestures, work, attention, and imperfections. Avoid staged handshakes or groups smiling at a laptop.

04

Lens language

Use 35 mm for environments and 85 mm for portraits. Keep depth of field intentional.

05

Finish

Use restrained film grain and natural texture. Remove synthetic AI markers, impossible reflections, and overly smooth surfaces.

Data and diagrams

Visualisation should make a relationship easier to understand than prose alone.

01

Charts

Use Ice White or Ink for the baseline series and Burnished Gold for the single important comparison.

02

Labels

Place labels near the data. Avoid detached legends when direct annotation is possible.

03

Axes

Use thin Smoke or muted rules. Remove unnecessary ticks, boxes, and background decoration.

04

Diagrams

Use a clear start, flow direction, decision gate, and outcome. Show human review explicitly.

05

Claims

Every number needs a source, date, unit, and scope. Do not create decorative metrics.

Motion and accessibility

Motion should reveal sequence and depth while keeping the static experience complete.

01

Motion vocabulary

Soft reveal, slow parallax, rail sweep, node pulse, orbital drift, and subtle hover lift.

02

Timing

Use 200–300 ms for direct controls, 400–650 ms for content reveals, and slower loops for ambient motion.

03

Easing

Controls should respond quickly. Atmospheric elements may use gentle ease-in-out or linear travel.

04

Reduced motion

When reduced motion is requested, remove looping movement and preserve hierarchy, focus, and meaning.

05

Accessibility

Maintain keyboard focus, semantic structure, readable contrast, descriptive labels, and non-motion alternatives.

Applications

The identity should adapt to the job without losing its sequence, restraint, or proof discipline.

Applications inherit the same foundation but change density, hierarchy, and interaction.

Website and product surfaces

Public pages explain the value in seconds; product surfaces help the user complete one useful step at a time.

One useful step

Clear state. Visible action. Human control.

Continue

01

Website

Lead with business value, problem, method, services, founder context, and a clear Workflow Audit path.

02

Product

Use compact navigation, visible state, progressive disclosure, and explicit human approval for meaningful writes.

03

Shared visual language

Dark-first surfaces, Outfit typography, gold signals, quiet grids, line-based flows, and restrained atmosphere.

04

Guardrail

Do not turn a public experience into an internal operations dashboard. Do not use empty panels where direct composition would be clearer.

ONE IDEA / ONE VISUAL RELATIONSHIP

Social and editorial assets

A Kramaniti post should make the reader understand a problem, sequence, or decision before it asks for attention.

FRAME 01

One tension.

STRATEGY / SYSTEM / CLARITY

FRAME 02

Build the logic.

STRATEGY / SYSTEM / CLARITY

FRAME 03

Offer the next useful step.

STRATEGY / SYSTEM / CLARITY

01
Carousel

Cover with one tension. Middle frames build the logic. Final frame offers a useful next step or method link.

02
Insight graphic

Use one diagram, two-tone type, and a visible source when data is present.

03
Founder post

Start from an observed operating pattern, not a broad AI trend. Connect experience to a practical lesson.

04
Reuse

Adapt an idea across formats without repeating the same headline, lead source, diagram genre, or visual composition.

Decks, reports, and video

Each format uses a different balance of editorial clarity and cinematic craft.

Deck

One argument per slide. Use large type, simple diagrams, and a visible decision path.

Report

Use warm-white pages, Ink text, restrained gold rules, compact tables, source notes, and the real mark in the running header.

Proposal

Lead with the client decision, scope, sequence, responsibilities, assumptions, and next step. Do not decorate uncertainty.

Video

Use a clear scene purpose, varied infographic language, readable timing, and a visual progression from friction to clarity.

Governance

A premium brand is a controlled operating system, not a collection of polished files.

Ownership, evidence, approval, and versioning protect trust over time.

SMALLEST USEFUL TEAM / ONE ASSEMBLED OUTPUT

Brand operating workflow

Cross-functional work is coordinated before production begins.

EXISTENCE IS NOT PERMISSION

Asset governance

Every reusable asset needs a source, owner, status, and approved context.

01

Public-ready

Approved for repeated use in the stated contexts.

02

Internal-only

Available for private planning, drafts, and internal references.

03

Needs review

Source, rights, quality, or channel context still needs confirmation.

04

Retired

Do not use without explicit reapproval.

05

Required record

Asset name, path, type, creator or source, permission status, approved channels, proof sensitivity, and review date where relevant.

Claim and proof governance

A claim is publishable only when its evidence and context support the exact wording.

01

Review

Identify whether the material contains a client name, logo, metric, testimonial, selected work, founder proof, or external research.

02

Verify

Check the primary source, date, unit, scope, and permission status.

03

Calibrate

Use exact wording for the available evidence. Soften to category-level language when proof is limited.

04

Approve

Founder approval is required for public proof, pricing, promises, testimonials, client references, and sensitive founder claims.

05

Record

Update the proof register so the decision survives beyond the current conversation.

BEFORE AN ASSET LEAVES DRAFT

Quality gate

The final check is strategic, verbal, visual, technical, and evidentiary.

01 Strategy

Does the work follow strategy before tools, systems before scale, and content after clarity?

02 Voice

Is it specific, business-first, useful, and free of generic AI-agency language?

03 Visual

Are the mark, palette, typography, spacing, contrast, and hierarchy correct?

04 Proof

Are claims sourced, permission-aware, and calibrated to the evidence?

05 Technical

Does the artifact render correctly across its intended sizes, formats, devices, or pages?

06 Continuity

Can another person find the source, understand the decision, and produce the next version?

KEEP THE SYSTEM FINDABLE

Production and file standards

Good production hygiene makes the brand easier to scale without visual or factual drift.

01

Naming

Use descriptive snake_case names and stable version labels.

02

Source and export

Keep an editable source when possible. Store approved exports under the brand asset library.

03

Logo

Use the registered artwork. Do not rasterize more than necessary or export from screenshots.

04

Color

Use sRGB for digital output. Verify CMYK conversions and physical proofs before commercial print.

05

Images

Keep adequate resolution, intentional crops, and provenance notes. Avoid repeated lossy compression.

06

Review

Render and inspect the real output. A successful export is not proof of a polished artifact.

Quick reference

Use this page as the final check before creating a new branded asset.

STRATEGY / SYSTEMS / COMMUNICATION

01

Positioning

First-principles AI systems partner.

03

Promise

Simplify how your business works, uses AI, and communicates.

05

Visual

Obsidian, Burnished Gold, Ice White, Outfit, JetBrains Mono, flow lines, nodes, negative space.

07

Boundary

AI assists. Humans remain accountable. Proof is never invented.

02

Sequence

Strategy before tools. Systems before scale. Content after clarity.

04

Voice

Clear, strategic, grounded, practical, premium, human.

06

CTA

Book a Workflow Audit.

ITEMS FOR FOUNDER REVIEW

Decisions still open

The book is complete as a working system while these choices remain intentionally visible.

01

Brand statements

Approve or revise the proposed purpose, vision, and mission.

02

Wordmark

Decide whether Kramaniti needs a dedicated wordmark asset or should continue with a symbol plus functional typeset name.

03

Mark specification

Approve formal construction drawings, clear-space geometry, and print minimums.

04

Asset permissions

Confirm which founder images, selected-work visuals, and product marks are approved for repeated public use.

05

Channel system

Confirm the first active brand channels and the founder's approval cadence.

06

Print system

Create CMYK and spot-color specifications only after a controlled physical proof.

CANONICAL INTERNAL REFERENCES

Source lineage

This edition consolidates implemented brand choices and current operating rules. The supplied Ledger book informed content sequencing only.
